DETAILED ACTION

Drawings

The specification is required to have a brief description of the drawings section.

Correction is required.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-11 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 1, a carnitine hydroxycitrate salt is claimed, however, a cation of carnitine is present in the recited structure. In this regard, carnitine salts have a trimethyl amine ,oiety, whereas the recited carnitine structure is only a dimethyl compound wherein the nitrogen bears no charge.

Claim 1 also requires that the recited salt is of natural origin, however, claim 2 requires a synthetic process to produce the salt.

Claim 6 recites a preliposome "according to one or more of the previous claims". However, one or more of the previous claims do not embrace preliposomes.

Claims 10 and 11 recites a carnitine salt "according to one or more of the previous claims". However, one or more of the previous claims do not embrace carnitine salts.

Art Unit: 1621

It is unclear in claim 9 as to what other cosmetics Applicant intends by the language "other similar types of cosmetics".

Claims 10 and 11 provides for the use of carnitine salts but, since the claim does not set forth any steps involved in the method/process, it is unclear what method/process applicant is intending to encompass. A claim is indefinite where it merely recites a use without any active, positive steps delimiting how this use is actually practiced.

Claims 10 and 11 are rejected under 35 U.S.C. 101 because the claimed recitation of a use, without setting forth any steps involved in the process, results in an improper definition of a process, i.e., results in a claim which is not a proper process claim under 35 U.S.C. 101. See for example *Ex parte Dunki*, 153 USPQ 678 (Bd.App. 1967) and *Clinical Products, Ltd.* v. *Brenner*, 255 F. Supp. 131, 149 USPQ 475 (D.D.C. 1966).

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Art Unit: 1621

Claims 1-3, 10 and 11 are rejected under 35 U.S.C. 102(e) as being anticipated by U.S. Patent Application Publication No. 20040185069 on an application by Gupta (Gupta).

Initially the examiner notes that Gupta take priority to provisional applications filed 10/4/2004, thus antedating the priority document of the captioned application. See attached CAS online citation [retrieved 7/11/2007] from STN, Columbus, OH, USA.

Gupta teaches carnitine hydroxycitrate salts in Example 8.

Gupta teaches dietary and cosmetic compositions, see paragraph 0031 and 0051.

Claims 2 and 3 are product by process claims, see MPEP 2113 (""[E]ven though product-by-process claims are limited by and defined by the process, determination of patentability is based on the product itself. The patentability of a product does not depend on its method of production. If the product in the product-by-process claim is the same as or obvious from a product of the prior art, the claim is unpatentable even though the prior product was made by a different process." *In re Thorpe*, 777 F.2d 695, 698, 227 USPQ 964, 966 (Fed. Cir. 1985)").

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the

Art Unit: 1621

invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 4-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gupta in view of "Drug Delivery Systems" in Kirk-Othmer Encyclopedia of Chemical Technology Copyright © 2001 by John Wiley & Sons, Inc., pp 42-93 (Kirk Othmer).

While Gupta teaches delivery systems at paragraph 0050, Gupta fails to explivitly teach preliposome delivery systems. However, it is for that proposition that the examiner joins Kirk Othmer). In this rega5rd, Kirk Othmer teaches that liposome delivery systems are known and available at the time of the invention, see page 84. Therefore, liposome delivery systems were well within the purview of those of ordinary skill for the purpose of delivering pharmaceutical salts into the body, and thus, prima facie obvious.

With regard to the particular formulation in claim 8, these formulations are well within the motivation of those of ordinary skill for the purpose of optimizing the efficacy of the composition.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Karl J. Puttlitz whose telephone number is (571) 272-0645. The examiner can normally be reached on Monday to Friday from 9 a.m. to 5 p.m.

Application/Control Number: 10/559,973

Art Unit: 1621

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Yvonne Eyler, can be reached at telephone number (571) 272-0871. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
